Introduction

This Data Specification describes the business/functional data used by the Online Banking Application as required by the FRD.

This specification is not a database schema. It describes functional/business data and names no tables, columns, indexes, databases, or implementation architecture.

Audience: Architecture and Development teams, Quality Assurance and Testing teams, Human reviewers and approvers of functional requirements

Data Entries

DS-001 — Customer Profile

Description: Business/functional identity data for a customer using the simulation.

Purpose: Supports onboarding and identifies the customer across journeys.

Related Functional Requirements: FR-001

Notes: Exact fields and validation constraints are unresolved (see OQ-013). Identity data is synthetic (see FR-021).

DS-002 — KYC Information

Description: KYC information supplied by the customer during onboarding.

Purpose: Supports KYC capture and bank-operations review (see FR-002, FR-011, FR-012).

Related Functional Requirements: FR-002, FR-011, FR-012

Notes: KYC is captured for the simulation and is subject to no real verification (constraint CON-003). Exact fields and validation constraints are unresolved (see OQ-013).

DS-003 — Aadhaar/PAN Information

Description: Aadhaar and PAN details provided by the customer, verified format-only and mocked.

Purpose: Supports capture of Aadhaar/PAN details without real identity verification.

Related Functional Requirements: FR-003

Notes: Verification is format-only and mocked (CON-003, business rule BR-002). Exact fields and format rules are unresolved (see OQ-013).

DS-004 — Account Data

Description: Customer account information used in the simulation.

Purpose: Supports account activation, transfers, and statement journeys.

Related Functional Requirements: FR-004, FR-007, FR-008, FR-009, FR-010, FR-013, FR-014, FR-015

Notes: Accounts are synthetic (see FR-021). Exact account data fields and account-state rules are unresolved (see OQ-006, OQ-013).

DS-005 — Account State

Description: The state of a customer account (for example, active or frozen) as used by bank operations and customers.

Purpose: Supports account activation/freezing, transfers, and state visibility.

Related Functional Requirements: FR-004, FR-007, FR-008, FR-013, FR-014, FR-015, FR-020

Notes: Exact account-state values and rules are unresolved (see OQ-006). State changes must be auditable (see FR-020).

DS-006 — Balance Data

Description: Synthetic balance information associated with a customer account.

Purpose: Supports simulated transfer and receipt of money and balance visibility.

Related Functional Requirements: FR-007, FR-008

Notes: Balances are synthetic (see FR-021). Minimum balance and transfer-related limits are unresolved (see OQ-002, OQ-007).

DS-007 — Beneficiary Data

Description: Beneficiary information used in the simulation.

Purpose: Supports transfer of simulated money.

Related Functional Requirements: FR-007, FR-021

Notes: Beneficiaries are synthetic (see FR-021). Beneficiary management itself is out of scope per the BRD; only the synthetic data used by the simulation is described.

DS-008 — Payment/Transfer Data

Description: Records of simulated payments/transfers of money.

Purpose: Supports transfer and receipt of simulated money and statement generation.

Related Functional Requirements: FR-007, FR-008, FR-009, FR-010, FR-021

Notes: Payments are synthetic (see FR-021); real money movement is not permitted (CON-002). Exact transfer/payment rules and limits are unresolved (see OQ-007, OQ-013).

DS-009 — Statement Data

Description: Data needed to present and download customer statements.

Purpose: Supports customer statement viewing and download.

Related Functional Requirements: FR-009, FR-010

Notes: Exact statement content and download behaviour are unresolved (see OQ-008).

DS-010 — Role and Access Data

Description: Data representing the two roles (Customer and Bank Operations) and the actions permitted per role.

Purpose: Supports role-based access requirements.

Related Functional Requirements: FR-005, FR-011, FR-017, FR-019

Notes: Exact role permissions and authorization rules are unresolved (see OQ-009).

DS-011 — Audit Trail Data

Description: Records of auditable state changes in the simulation.

Purpose: Supports auditable state changes and bank-operations access to the audit trail.

Related Functional Requirements: FR-016, FR-020

Notes: Exact audit events to be recorded are unresolved (see OQ-011).

DS-012 — Session Data

Description: Data representing an authenticated session for a Customer or Bank Operations user.

Purpose: Supports login, logout, and role-based access.

Related Functional Requirements: FR-005, FR-006, FR-017, FR-018, FR-019

Notes: Exact authentication and session rules are unresolved (see OQ-009, OQ-010).
