1. Introduction

1.1 Purpose

The Online Banking Application is an educational simulation developed to demonstrate a coherent, traceable software development lifecycle. This Business Requirements Document specifies, in user/business language, what the business wants the system to do. It is the primary deliverable of the business-analysis stage and forms the basis for the Functional Requirements Document (FRD) and User Acceptance Testing (UAT).

1.2 Scope

This BRD covers the business requirements for the Online Banking Application educational simulation as bounded by the project charter and the scope agreement. It defines the business capabilities, business rules, constraints, assumptions, and open questions. It does not specify technical implementation.

1.3 Audience

- Business Analysts
- Requirements Analysts
- Architecture and Development teams

- Quality Assurance and Testing teams
 - Defect Root Cause Analysis teams
 - Human reviewers and approvers of business requirements
-

2. Project Drivers

2.1 The purpose of the application

Customers expect secure digital access to banking capabilities, including accounts, transfers, and statements. The project delivers a coherent online-banking simulation using synthetic data, coordinated across business analysis, architecture, development, testing, and defect root-cause analysis, supported by reusable AI-assisted engineering agents. Success requires demonstrating that an approved business rule can be traced through requirement, design element, implementation, test, defect decision, and final evidence record.

2.2 Client, Customer and other Stakeholders

- **Business Analysis** (Ritu & Team (Group 2)): Turn approved needs into a Business Requirements Document.
 - **Architecture, Build and Unit Test (Development)** (Mohit & Team): Technical design, build, and unit testing.
 - **Quality Assurance and Testing** (Mandeep & Team): System testing and automation.
 - **Defect Root Cause Analysis** (Adiba & Team): Defect root-cause analysis.
-

2.3 Users of the Application

- **Customer**: Completes onboarding, provides KYC and Aadhaar/PAN information, activates an account, logs in/out, transfers and receives simulated money, and views/downloads statements.
 - **Bank Operations**: Reviews KYC, sets KYC status, activates/freezes accounts, views customer account state, accesses the audit trail, and logs in/out.
-

2.4 Key success factors

- A coherent banking simulation using synthetic identities, accounts, balances, beneficiaries, and payments.
- Role-based customer and bank-operations journeys with auditable state changes.
- Agent output that is reviewable, reproducible, schema-valid, source-linked, and subject to human approval.
- Traceability of approved business rules through requirement, design, implementation, test, and evidence.
- Application of security, privacy, accessibility, reliability, and testability as acceptance conditions.
- Governance through baselines, versioning, change control, traceability, evidence, risk management, and retrospectives.

3. Constraints

3.1 Constraints

ID	Constraint	Source
CON-001	The system is an educational simulation, not a production banking system.	CHARTER-6
CON-002	Real money movement is not permitted; money movement is simulated using synthetic data.	CHARTER-6, SCOPE-5
CON-003	Real identity verification is not permitted; Aadhaar/PAN verification is format-only and mocked.	CHARTER-6, SCOPE-5
CON-004	Credit decisioning is not permitted.	CHARTER-6, SCOPE-5
CON-005	Production bank integration is not permitted, including real payment gateways and external KYC integrations.	CHARTER-6, SCOPE-5
CON-006	Business requirements must not invent business decisions not present in the source material.	AGENTS (BRD Rules)

4. Assumptions and Dependencies

- **ASM-001:** The project uses synthetic identities, accounts, balances, beneficiaries, and payments throughout the simulation. (Source: CHARTER-3.1, SCOPE-4)
- **ASM-002:** The system supports two user roles: Customer and Bank Operations. (Source: CHARTER-3.2, SCOPE-3)

- **ASM-003:** All agent-produced artifacts are reviewable, reproducible, schema-valid, source-linked, and subject to human approval. (Source: CHARTER-5)
 - **ASM-004:** Candidate in-scope business areas are subject to detailed requirement confirmation and human approval before being treated as approved requirements. (Source: SCOPE-2)
 - **ASM-005:** Aadhaar/PAN verification is format-only and mocked; no real identity verification is performed. (Source: AGENTS (Business Scope))
-
-

5. Current State

5.1 Stakeholder Problem and Desired State Capture

Customers expect secure digital access to onboarding, accounts, transfers, statements, and related banking functions. Student projects can treat business analysis, architecture, engineering, testing, evidence management, and defect triage as isolated activities, which can result in ambiguous requirements, untestable designs, weak handoffs, and disagreement over whether a failure is a defect or a new request.

5.2 Overview of current business environment

5.2.1 Existing business environment

No detailed description of an existing business environment is provided in the source material. The project is a new educational simulation and is not based on an existing production banking system.

5.2.2 Existing application environment

No existing application environment is described in the source material. The application is greenfield for the purposes of this simulation.

6. Stakeholder Profiles

6.1 Customer (STK-001)

Attribute	Details
Description	An end user of the online banking simulation who manages their own onboarding, KYC, account activation, transactions, and statements.

Attribute	Details
Success Criteria	Can complete onboarding and provide KYC and Aadhaar/PAN information. Can activate an account and log in/out. Can transfer and receive simulated money. Can view and download statements.
Deliverables	Completion of onboarding. Provision of KYC and Aadhaar/PAN information. Activation of an account.

6.2 Bank Operations (STK-002)

Attribute	Details
Description	A bank-operations user who administers customer accounts and KYC within the simulation.
Success Criteria	Can review KYC and set KYC status. Can activate and freeze customer accounts. Can view customer account state. Can access the audit trail. Can log in/out.
Deliverables	Review and update of KYC status. Activation and freezing of customer accounts. Access to the audit trail.

7. Scope of Work

7.1 Scope of the Application

Is included	Is not included
- Customer onboarding
- KYC information capture (format-only, mocked for Aadhaar/PAN)
- Account activation
- Customer login/logout
- Transfer of simulated money
- Receipt of simulated money
- Viewing and downloading of statements
- Bank operations: review KYC, set KYC status, activate/freeze accounts, view customer account state, access audit trail, login/logout
- Role-based access for customer and bank-operations journeys
- Auditable state changes
- Traceable requirements and evidence
- Reusable AI-assisted engineering agents	- Beneficiary management
- Notifications
- Service requests
- Real Aadhaar verification
- Real PAN verification
- Real banking integrations
- Real payment gateways
- Real money movement
- Credit decisioning
- Lending
- Real financial transactions
- External KYC integrations

8. Functional and Data Requirements

8.1 Requirements summary

This section lists the business requirements for the Online Banking Application simulation, grouped by business function for the Customer and Bank Operations roles. Formal technical implementation is out of scope for this document and belongs to the FRD stage. Each requirement is identified by a unique ID (BR-###) and carries source traceability.

8.2 Requirement priorities

The priority for delivering each requirement is listed to the right of the requirement statement using the following codes:

Code	Priority
1	Must
2	Should
3	Could
F	Future
BP	Business Process

Where the source material does not explicitly establish a priority, the priority is recorded as **UNSPECIFIED**. No priority is invented.

8.3 Functional Requirements

Customer - Onboarding

Detailed requirement	Priority	Source
BR-001 — The system shall allow a customer to complete onboarding.	UNSPECIFIED	AGENTS (Customer scope), SCOPE-2

Customer - KYC

Detailed requirement	Priority	Source
BR-002 — The system shall allow a customer to provide KYC information.	UNSPECIFIED	AGENTS (Customer scope)
BR-003 — The system shall allow a customer to provide Aadhaar and PAN information. Verification of Aadhaar/PAN is format-only and mocked.	UNSPECIFIED	AGENTS (Customer scope), AGENTS (Out of scope)

Customer - Account

Detailed requirement	Priority	Source
BR-004 — The system shall allow a customer to activate an account.	UNSPECIFIED	AGENTS (Customer scope)

Customer - Access

Detailed requirement	Priority	Source
BR-005 — The system shall allow a customer to log in.	UNSPECIFIED	AGENTS (Customer scope)
BR-006 — The system shall allow a customer to log out.	UNSPECIFIED	AGENTS (Customer scope)

Customer - Transactions

Detailed requirement	Priority	Source
BR-007 — The system shall allow a customer to transfer simulated money.	UNSPECIFIED	AGENTS (Customer scope)
BR-008 — The system shall allow a customer to receive simulated money.	UNSPECIFIED	AGENTS (Customer scope)

Customer - Statements

Detailed requirement	Priority	Source
BR-009 — The system shall allow a customer to view statements.	UNSPECIFIED	AGENTS (Customer scope)
BR-010 — The system shall allow a customer to download statements.	UNSPECIFIED	AGENTS (Customer scope)

Bank Operations - KYC

Detailed requirement	Priority	Source
BR-011 — The system shall allow bank operations to review KYC information.	UNSPECIFIED	AGENTS (Bank operations scope)
BR-012 — The system shall allow bank operations to set KYC status.	UNSPECIFIED	AGENTS (Bank operations scope)

Bank Operations - Account

Detailed requirement	Priority	Source
BR-013 — The system shall allow bank operations to activate customer accounts.	UNSPECIFIED	AGENTS (Bank operations scope)
BR-014 — The system shall allow bank operations to freeze customer accounts.	UNSPECIFIED	AGENTS (Bank operations scope)
BR-015 — The system shall allow bank operations to view customer account state.	UNSPECIFIED	AGENTS (Bank operations scope)

Bank Operations - Audit

Detailed requirement	Priority	Source
BR-016 — The system shall allow bank operations to access the audit trail.	UNSPECIFIED	AGENTS (Bank operations scope), CHARTER-3.2

Bank Operations - Access

Detailed requirement	Priority	Source
BR-017 — The system shall allow bank operations to log in.	UNSPECIFIED	AGENTS (Bank operations scope)
BR-018 — The system shall allow bank operations to log out.	UNSPECIFIED	AGENTS (Bank operations scope)

Cross-cutting - Access

Detailed requirement	Priority	Source
BR-019 — The system shall provide role-based access so that customer and bank-operations journeys are kept distinct.	UNSPECIFIED	CHARTER-3.2

Cross-cutting - Audit

Detailed requirement	Priority	Source
BR-020 — The system shall make state changes auditable.	UNSPECIFIED	CHARTER-3.2, CHARTER-7

Cross-cutting - Simulation

Detailed requirement	Priority	Source
BR-021 — The system shall use synthetic identities, accounts, balances, beneficiaries, and payments for the simulation.	UNSPECIFIED	CHARTER-3.1, SCOPE-4

Cross-cutting - Governance

Detailed requirement	Priority	Source
BR-022 — Agent-produced artifacts shall be reviewable, reproducible, schema-valid, source-linked, and subject to human approval.	UNSPECIFIED	CHARTER-3.4, CHARTER-5

Cross-cutting - Traceability

Detailed requirement	Priority	Source
BR-023 — Approved business rules shall remain traceable through requirements and downstream evidence.	UNSPECIFIED	CHARTER-2, SCOPE-6

8.4 Business Rules

ID	Business Rule	Source
BR-001	The simulation must not use real money; money movement is simulated using synthetic data.	CHARTER-6, SCOPE-5
BR-002	The simulation must not perform real identity verification; Aadhaar/PAN verification is format-only and mocked.	CHARTER-6, SCOPE-5
BR-003	The system must not perform credit decisioning, lending, or real financial transactions.	CHARTER-6, SCOPE-5
BR-004	The system must not integrate with production banks, real payment gateways, or external KYC integrations.	CHARTER-6, SCOPE-5
BR-005	The system supports two distinct roles: Customer and Bank Operations, with role-based access.	CHARTER-3.2, SCOPE-3
BR-006	State changes in the system must be auditable.	CHARTER-3.2

ID	Business Rule	Source
BR-007	Any requirement outside the approved scope must be handled through the project's change-control process rather than silently added to the baseline.	SCOPE-8
BR-008	Every project handoff must carry version, source IDs, assumptions, open questions, and approval status.	CHARTER-5

8.5 Traceability

The following SOURCE → BUSINESS REQUIREMENT chain is maintained:

Source	Business Requirement
AGENTS (Customer scope)	BR-001
SCOPE-2	BR-001
AGENTS (Customer scope)	BR-002
AGENTS (Customer scope)	BR-003
AGENTS (Out of scope)	BR-003
AGENTS (Customer scope)	BR-004
AGENTS (Customer scope)	BR-005
AGENTS (Customer scope)	BR-006
AGENTS (Customer scope)	BR-007
AGENTS (Customer scope)	BR-008
AGENTS (Customer scope)	BR-009
AGENTS (Customer scope)	BR-010
AGENTS (Bank operations scope)	BR-011
AGENTS (Bank operations scope)	BR-012
AGENTS (Bank operations scope)	BR-013
AGENTS (Bank operations scope)	BR-014
AGENTS (Bank operations scope)	BR-015
AGENTS (Bank operations scope)	BR-016
CHARTER-3.2	BR-016
AGENTS (Bank operations scope)	BR-017
AGENTS (Bank operations scope)	BR-018
CHARTER-3.2	BR-019
CHARTER-3.2	BR-020

Source	Business Requirement
CHARTER-7	BR-020
CHARTER-3.1	BR-021
SCOPE-4	BR-021
CHARTER-3.4	BR-022
CHARTER-5	BR-022
CHARTER-2	BR-023
SCOPE-6	BR-023

8.6 Open Questions

ID	Open Question	Status	Source
OQ-001	Who executes UAT and signs off business acceptance?	OPEN	CHARTER-8, SCOPE-7
OQ-002	What is the minimum balance value?	OPEN	CHARTER-8, SCOPE-7
OQ-003	What is the daily transfer cap?	OPEN	CHARTER-8, SCOPE-7
OQ-004	Is the data-testid convention confirmed with the development team?	OPEN	AGENTS (Open Questions)
OQ-005	What are the exact onboarding workflow and validation rules?	OPEN	SCOPE-7
OQ-006	What are the exact account operations and account-state rules?	OPEN	SCOPE-7
OQ-007	What are the exact transfer/payment rules and limits?	OPEN	SCOPE-7
OQ-008	What are the statement content and download behaviour details?	OPEN	SCOPE-7
OQ-009	What are the exact role permissions and authorization rules?	OPEN	SCOPE-3, SCOPE-7
OQ-010	What are the detailed security, privacy, accessibility, and testability requirements?	OPEN	CHARTER-8, SCOPE-7
OQ-011	What are the exact audit events to be recorded?	OPEN	SCOPE-7

ID	Open Question	Status	Source
OQ-012	What are the error codes and error messages?	OPEN	SCOPE-7
OQ-013	What are the data fields and validation constraints?	OPEN	SCOPE-7

9. Business Implementation Requirements

This section is intended to make the business aware of the depth and scope of the system implementation. The simulation is delivered through the coordinated work of four agent families (BRD, technical design/coding/unit testing, system-test/automation, and defect root-cause analysis). Human review and approval of agent output is required. Detailed training, migration, and implementation planning requirements are NOT SPECIFIED by the source material.

10. Issues

10.1 Open Issues

Open questions that remain unresolved and require business confirmation are listed in section 8.6. These items must be confirmed before being treated as approved requirements. See also the Open Questions artifact.

10.2 New Problems

NOT SPECIFIED. No probable adverse effects are defined by the source material.

10.3 Deferred Requirements

None identified in the source material as deferred in the current development scenario.

10.4 Ideas for Solutions

NOT SPECIFIED. The source material does not identify solution ideas at the business-requirements stage.

10.5 Management Issues

Governance through baselines, versioning, change control, traceability, evidence, risk management, and retrospectives is a stated project success criterion (CHARTER-7). Detailed management-issue resolution steps are NOT SPECIFIED by the source material.

Status

- **Status:** RAW
- **Ready for human review:** READY_FOR_HUMAN_REVIEW
- **Approval status:** NOT_APPROVED
