UAT Cases

UAT-001 - UAT for Acceptance for Customer Completes Onboarding - 1

- **Objective:** Verify that: The system shall make available an onboarding journey to a customer.
- **Requirement Reference:** FR-001
- **Acceptance Criteria Reference:** AC-001.1
- **Preconditions:** A customer exists and has initiated the onboarding journey.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall make available an onboarding journey to a customer.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: A customer exists and has initiated the onboarding journey.
 - Step 2: Trigger the functional behavior: The customer initiates onboarding.
 - Step 3: Observe system response: The system shall make available an onboarding journey to a customer.
 - Step 4: Verify the system behaves as expected.

UAT-002 - UAT for Acceptance for Customer Completes Onboarding - 2

- **Objective:** Verify that: The system shall accept the information required for onboarding.
- **Requirement Reference:** FR-001
- **Acceptance Criteria Reference:** AC-001.2
- **Preconditions:** A customer exists and has initiated the onboarding journey.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall accept the information required for onboarding.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: A customer exists and has initiated the onboarding journey.

- Step 2: Trigger the functional behavior: The customer initiates onboarding.
- Step 3: Observe system response: The system shall accept the information required for onboarding.
- Step 4: Verify the system behaves as expected.

UAT-003 - UAT for Acceptance for Customer Completes Onboarding - 3

- **Objective:** Verify that: The system shall allow the customer to complete the onboarding journey.
- **Requirement Reference:** FR-001
- **Acceptance Criteria Reference:** AC-001.3
- **Preconditions:** A customer exists and has initiated the onboarding journey.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow the customer to complete the onboarding journey.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: A customer exists and has initiated the onboarding journey.
 - Step 2: Trigger the functional behavior: The customer initiates onboarding.
 - Step 3: Observe system response: The system shall allow the customer to complete the onboarding journey.
 - Step 4: Verify the system behaves as expected.

UAT-004 - UAT for Acceptance for Customer Provides KYC Information - 1

- **Objective:** Verify that: The system shall accept KYC information from the customer.
- **Requirement Reference:** FR-002
- **Acceptance Criteria Reference:** AC-002.1
- **Preconditions:** The customer is progressing through onboarding.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall accept KYC information from the customer.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer is progressing through onboarding.
 - Step 2: Trigger the functional behavior: The customer provides KYC information.
 - Step 3: Observe system response: The system shall accept KYC information from the customer.
 - Step 4: Verify the system behaves as expected.

UAT-005 - UAT for Acceptance for Customer Provides KYC Information - 2

- **Objective:** Verify that: KYC information is captured for the simulation; it is not verified against any real authority.
- **Requirement Reference:** FR-002
- **Acceptance Criteria Reference:** AC-002.2
- **Preconditions:** The customer is progressing through onboarding.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** KYC information is captured for the simulation; it is not verified against any real authority.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer is progressing through onboarding.
 - Step 2: Trigger the functional behavior: The customer provides KYC information.
 - Step 3: Observe system response: KYC information is captured for the simulation; it is not verified against any real authority.
 - Step 4: Verify the system behaves as expected.

UAT-006 - UAT for Acceptance for Customer Provides Aadhaar and PAN Information - 1

- **Objective:** Verify that: The system shall accept Aadhaar and PAN information from the customer.
- **Requirement Reference:** FR-003
- **Acceptance Criteria Reference:** AC-003.1
- **Preconditions:** The customer is providing KYC information during onboarding.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall accept Aadhaar and PAN information from the customer.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer is providing KYC information during onboarding.
 - Step 2: Trigger the functional behavior: The customer provides Aadhaar and/or PAN information.
 - Step 3: Observe system response: The system shall accept Aadhaar and PAN information from the customer.
 - Step 4: Verify the system behaves as expected.

UAT-007 - UAT for Acceptance for Customer Provides Aadhaar and PAN Information - 2

- **Objective:** Verify that: Aadhaar/PAN verification performed by the system, if any, shall be format-only and mocked.
- **Requirement Reference:** FR-003
- **Acceptance Criteria Reference:** AC-003.2
- **Preconditions:** The customer is providing KYC information during onboarding.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Aadhaar/PAN verification performed by the system, if any, shall be format-only and mocked.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer is providing KYC information during onboarding.
 - Step 2: Trigger the functional behavior: The customer provides Aadhaar and/or PAN information.
 - Step 3: Observe system response: Aadhaar/PAN verification performed by the system, if any, shall be format-only and mocked.
 - Step 4: Verify the system behaves as expected.

UAT-008 - UAT for Acceptance for Customer Provides Aadhaar and PAN Information - 3

- **Objective:** Verify that: The system shall not perform real identity verification against any external authority.
- **Requirement Reference:** FR-003
- **Acceptance Criteria Reference:** AC-003.3
- **Preconditions:** The customer is providing KYC information during onboarding.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall not perform real identity verification against any external authority.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer is providing KYC information during onboarding.
 - Step 2: Trigger the functional behavior: The customer provides Aadhaar and/or PAN information.
 - Step 3: Observe system response: The system shall not perform real identity verification against any external authority.
 - Step 4: Verify the system behaves as expected.

UAT-009 - UAT for Acceptance for Customer Activates an Account - 1

- **Objective:** Verify that: The system shall allow a customer account to be activated.
- **Requirement Reference:** FR-004
- **Acceptance Criteria Reference:** AC-004.1
- **Preconditions:** The customer has an account associated with their profile.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow a customer account to be activated.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer has an account associated with their profile.
 - Step 2: Trigger the functional behavior: The customer, or bank operations on the customer's behalf, initiates account activation.
 - Step 3: Observe system response: The system shall allow a customer account to be activated.
 - Step 4: Verify the system behaves as expected.

UAT-010 - UAT for Acceptance for Customer Activates an Account - 2

- **Objective:** Verify that: Account activation shall result in an account state that reflects the activation.
- **Requirement Reference:** FR-004
- **Acceptance Criteria Reference:** AC-004.2
- **Preconditions:** The customer has an account associated with their profile.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Account activation shall result in an account state that reflects the activation.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer has an account associated with their profile.
 - Step 2: Trigger the functional behavior: The customer, or bank operations on the customer's behalf, initiates account activation.
 - Step 3: Observe system response: Account activation shall result in an account state that reflects the activation.
 - Step 4: Verify the system behaves as expected.

UAT-011 - UAT for Acceptance for Customer Login - 1

- **Objective:** Verify that: The system shall allow a customer to log in.

- **Requirement Reference:** FR-005
- **Acceptance Criteria Reference:** AC-005.1
- **Preconditions:** The customer has a registered identity in the system.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow a customer to log in.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer has a registered identity in the system.
 - Step 2: Trigger the functional behavior: The customer initiates login.
 - Step 3: Observe system response: The system shall allow a customer to log in.
 - Step 4: Verify the system behaves as expected.

UAT-012 - UAT for Acceptance for Customer Login - 2

- **Objective:** Verify that: Login shall provide the customer access consistent with role-based access requirements (see FR-019).
- **Requirement Reference:** FR-005
- **Acceptance Criteria Reference:** AC-005.2
- **Preconditions:** The customer has a registered identity in the system.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Login shall provide the customer access consistent with role-based access requirements (see FR-019).
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer has a registered identity in the system.
 - Step 2: Trigger the functional behavior: The customer initiates login.
 - Step 3: Observe system response: Login shall provide the customer access consistent with role-based access requirements (see FR-019).
 - Step 4: Verify the system behaves as expected.

UAT-013 - UAT for Acceptance for Customer Logout - 1

- **Objective:** Verify that: The system shall allow a customer to log out.
- **Requirement Reference:** FR-006
- **Acceptance Criteria Reference:** AC-006.1
- **Preconditions:** The customer has an active session.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow a customer to log out.

- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: The customer has an active session.
- Step 2: Trigger the functional behavior: The customer initiates logout.
- Step 3: Observe system response: The system shall allow a customer to log out.
- Step 4: Verify the system behaves as expected.

UAT-014 - UAT for Acceptance for Customer Logout - 2

- **Objective:** Verify that: Logout shall terminate the customer session.
- **Requirement Reference:** FR-006
- **Acceptance Criteria Reference:** AC-006.2
- **Preconditions:** The customer has an active session.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Logout shall terminate the customer session.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: The customer has an active session.
- Step 2: Trigger the functional behavior: The customer initiates logout.
- Step 3: Observe system response: Logout shall terminate the customer session.
- Step 4: Verify the system behaves as expected.

UAT-015 - UAT for Acceptance for Customer Transfers Simulated Money - 1

- **Objective:** Verify that: The system shall allow a customer to initiate a transfer of simulated money.
- **Requirement Reference:** FR-007
- **Acceptance Criteria Reference:** AC-007.1
- **Preconditions:** The customer has an active session and an account in a state that permits transfer.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow a customer to initiate a transfer of simulated money.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: The customer has an active session and an account in a state that permits transfer.
- Step 2: Trigger the functional behavior: The customer initiates a transfer of simulated money.

- Step 3: Observe system response: The system shall allow a customer to initiate a transfer of simulated money.
- Step 4: Verify the system behaves as expected.

UAT-016 - UAT for Acceptance for Customer Transfers Simulated Money - 2

- **Objective:** Verify that: Money movement is simulated using synthetic data; no real money moves.
- **Requirement Reference:** FR-007
- **Acceptance Criteria Reference:** AC-007.2
- **Preconditions:** The customer has an active session and an account in a state that permits transfer.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Money movement is simulated using synthetic data; no real money moves.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: The customer has an active session and an account in a state that permits transfer.
- Step 2: Trigger the functional behavior: The customer initiates a transfer of simulated money.
- Step 3: Observe system response: Money movement is simulated using synthetic data; no real money moves.
- Step 4: Verify the system behaves as expected.

UAT-017 - UAT for Acceptance for Customer Receives Simulated Money - 1

- **Objective:** Verify that: The system shall allow a customer to receive simulated money.
- **Requirement Reference:** FR-008
- **Acceptance Criteria Reference:** AC-008.1
- **Preconditions:** The customer has an account in a state that permits receipt.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow a customer to receive simulated money.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: The customer has an account in a state that permits receipt.
- Step 2: Trigger the functional behavior: Simulated money is received for the customer.
- Step 3: Observe system response: The system shall allow a customer to receive simulated money.
- Step 4: Verify the system behaves as expected.

UAT-018 - UAT for Acceptance for Customer Receives Simulated Money - 2

- **Objective:** Verify that: Money movement is simulated using synthetic data; no real money moves.
- **Requirement Reference:** FR-008
- **Acceptance Criteria Reference:** AC-008.2
- **Preconditions:** The customer has an account in a state that permits receipt.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Money movement is simulated using synthetic data; no real money moves.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer has an account in a state that permits receipt.
 - Step 2: Trigger the functional behavior: Simulated money is received for the customer.
 - Step 3: Observe system response: Money movement is simulated using synthetic data; no real money moves.
 - Step 4: Verify the system behaves as expected.

UAT-019 - UAT for Acceptance for Customer Views Statements - 1

- **Objective:** Verify that: The system shall allow a customer to view statements.
- **Requirement Reference:** FR-009
- **Acceptance Criteria Reference:** AC-009.1
- **Preconditions:** The customer has an active session and an account with statement data.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow a customer to view statements.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer has an active session and an account with statement data.
 - Step 2: Trigger the functional behavior: The customer requests to view a statement.
 - Step 3: Observe system response: The system shall allow a customer to view statements.
 - Step 4: Verify the system behaves as expected.

UAT-020 - UAT for Acceptance for Customer Downloads Statements - 1

- **Objective:** Verify that: The system shall allow a customer to download statements.

- **Requirement Reference:** FR-010
- **Acceptance Criteria Reference:** AC-010.1
- **Preconditions:** The customer has an active session and an account with statement data.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow a customer to download statements.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The customer has an active session and an account with statement data.
 - Step 2: Trigger the functional behavior: The customer requests to download a statement.
 - Step 3: Observe system response: The system shall allow a customer to download statements.
 - Step 4: Verify the system behaves as expected.

UAT-021 - UAT for Acceptance for Bank Operations Reviews KYC - 1

- **Objective:** Verify that: The system shall allow bank operations to review KYC information.
- **Requirement Reference:** FR-011
- **Acceptance Criteria Reference:** AC-011.1
- **Preconditions:** Bank operations has an active session and the required role-based access.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow bank operations to review KYC information.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: Bank operations has an active session and the required role-based access.
 - Step 2: Trigger the functional behavior: Bank operations requests to review a customer's KYC information.
 - Step 3: Observe system response: The system shall allow bank operations to review KYC information.
 - Step 4: Verify the system behaves as expected.

UAT-022 - UAT for Acceptance for Bank Operations Sets KYC Status - 1

- **Objective:** Verify that: The system shall allow bank operations to set the KYC status of a customer.
- **Requirement Reference:** FR-012
- **Acceptance Criteria Reference:** AC-012.1

- **Preconditions:** Bank operations has an active session, the required role-based access, and has reviewed the KYC information.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow bank operations to set the KYC status of a customer.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has an active session, the required role-based access, and has reviewed the KYC information.
- Step 2: Trigger the functional behavior: Bank operations sets the KYC status for a customer.
- Step 3: Observe system response: The system shall allow bank operations to set the KYC status of a customer.
- Step 4: Verify the system behaves as expected.

UAT-023 - UAT for Acceptance for Bank Operations Activates Customer Accounts - 1

- **Objective:** Verify that: The system shall allow bank operations to activate a customer account.
- **Requirement Reference:** FR-013
- **Acceptance Criteria Reference:** AC-013.1
- **Preconditions:** Bank operations has an active session and the required role-based access.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow bank operations to activate a customer account.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has an active session and the required role-based access.
- Step 2: Trigger the functional behavior: Bank operations initiates activation of a customer account.
- Step 3: Observe system response: The system shall allow bank operations to activate a customer account.
- Step 4: Verify the system behaves as expected.

UAT-024 - UAT for Acceptance for Bank Operations Freezes Customer Accounts - 1

- **Objective:** Verify that: The system shall allow bank operations to freeze a customer account.
- **Requirement Reference:** FR-014
- **Acceptance Criteria Reference:** AC-014.1

- **Preconditions:** Bank operations has an active session and the required role-based access.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow bank operations to freeze a customer account.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has an active session and the required role-based access.
- Step 2: Trigger the functional behavior: Bank operations initiates a freeze of a customer account.
- Step 3: Observe system response: The system shall allow bank operations to freeze a customer account.
- Step 4: Verify the system behaves as expected.

UAT-025 - UAT for Acceptance for Bank Operations Freezes Customer Accounts - 2

- **Objective:** Verify that: A frozen account shall reflect the frozen state.
- **Requirement Reference:** FR-014
- **Acceptance Criteria Reference:** AC-014.2
- **Preconditions:** Bank operations has an active session and the required role-based access.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** A frozen account shall reflect the frozen state.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has an active session and the required role-based access.
- Step 2: Trigger the functional behavior: Bank operations initiates a freeze of a customer account.
- Step 3: Observe system response: A frozen account shall reflect the frozen state.
- Step 4: Verify the system behaves as expected.

UAT-026 - UAT for Acceptance for Bank Operations Views Customer Account State - 1

- **Objective:** Verify that: The system shall allow bank operations to view the state of a customer account.
- **Requirement Reference:** FR-015
- **Acceptance Criteria Reference:** AC-015.1
- **Preconditions:** Bank operations has an active session and the required role-based access.
- **Test Data:** Synthetic test data consistent with simulation constraints

- **Expected Business Outcome:** The system shall allow bank operations to view the state of a customer account.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has an active session and the required role-based access.
- Step 2: Trigger the functional behavior: Bank operations requests to view a customer's account state.
- Step 3: Observe system response: The system shall allow bank operations to view the state of a customer account.
- Step 4: Verify the system behaves as expected.

UAT-027 - UAT for Acceptance for Bank Operations Accesses the Audit Trail - 1

- **Objective:** Verify that: The system shall allow bank operations to access the audit trail.
- **Requirement Reference:** FR-016
- **Acceptance Criteria Reference:** AC-016.1
- **Preconditions:** Bank operations has an active session and the required role-based access.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow bank operations to access the audit trail.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has an active session and the required role-based access.
- Step 2: Trigger the functional behavior: Bank operations requests access to the audit trail.
- Step 3: Observe system response: The system shall allow bank operations to access the audit trail.
- Step 4: Verify the system behaves as expected.

UAT-028 - UAT for Acceptance for Bank Operations Login - 1

- **Objective:** Verify that: The system shall allow bank operations to log in.
- **Requirement Reference:** FR-017
- **Acceptance Criteria Reference:** AC-017.1
- **Preconditions:** Bank operations has a registered identity in the system.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow bank operations to log in.
- **Result:** PENDING

- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has a registered identity in the system.
- Step 2: Trigger the functional behavior: Bank operations initiates login.
- Step 3: Observe system response: The system shall allow bank operations to log in.
- Step 4: Verify the system behaves as expected.

UAT-029 - UAT for Acceptance for Bank Operations Login - 2

- **Objective:** Verify that: Login shall provide bank operations access consistent with role-based access requirements (see FR-019).
- **Requirement Reference:** FR-017
- **Acceptance Criteria Reference:** AC-017.2
- **Preconditions:** Bank operations has a registered identity in the system.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Login shall provide bank operations access consistent with role-based access requirements (see FR-019).
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has a registered identity in the system.
- Step 2: Trigger the functional behavior: Bank operations initiates login.
- Step 3: Observe system response: Login shall provide bank operations access consistent with role-based access requirements (see FR-019).
- Step 4: Verify the system behaves as expected.

UAT-030 - UAT for Acceptance for Bank Operations Logout - 1

- **Objective:** Verify that: The system shall allow bank operations to log out.
- **Requirement Reference:** FR-018
- **Acceptance Criteria Reference:** AC-018.1
- **Preconditions:** Bank operations has an active session.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall allow bank operations to log out.
- **Result:** PENDING
- **Actions:**
- Step 1: Ensure preconditions are met: Bank operations has an active session.
- Step 2: Trigger the functional behavior: Bank operations initiates logout.

- Step 3: Observe system response: The system shall allow bank operations to log out.
- Step 4: Verify the system behaves as expected.

UAT-031 - UAT for Acceptance for Bank Operations Logout - 2

- **Objective:** Verify that: Logout shall terminate the bank-operations session.
- **Requirement Reference:** FR-018
- **Acceptance Criteria Reference:** AC-018.2
- **Preconditions:** Bank operations has an active session.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Logout shall terminate the bank-operations session.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: Bank operations has an active session.
 - Step 2: Trigger the functional behavior: Bank operations initiates logout.
 - Step 3: Observe system response: Logout shall terminate the bank-operations session.
 - Step 4: Verify the system behaves as expected.

UAT-032 - UAT for Acceptance for Role-Based Access - 1

- **Objective:** Verify that: The system shall keep customer and bank-operations journeys distinct through role-based access.
- **Requirement Reference:** FR-019
- **Acceptance Criteria Reference:** AC-019.1
- **Preconditions:** The system has defined roles for Customer and Bank Operations.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall keep customer and bank-operations journeys distinct through role-based access.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The system has defined roles for Customer and Bank Operations.
 - Step 2: Trigger the functional behavior: A user (Customer or Bank Operations) attempts to perform an action in the system.
 - Step 3: Observe system response: The system shall keep customer and bank-operations journeys distinct through role-based access.
 - Step 4: Verify the system behaves as expected.

UAT-033 - UAT for Acceptance for Role-Based Access - 2

- **Objective:** Verify that: Actions available to a user shall be consistent with the user's role.
- **Requirement Reference:** FR-019
- **Acceptance Criteria Reference:** AC-019.2
- **Preconditions:** The system has defined roles for Customer and Bank Operations.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Actions available to a user shall be consistent with the user's role.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The system has defined roles for Customer and Bank Operations.
 - Step 2: Trigger the functional behavior: A user (Customer or Bank Operations) attempts to perform an action in the system.
 - Step 3: Observe system response: Actions available to a user shall be consistent with the user's role.
 - Step 4: Verify the system behaves as expected.

UAT-034 - UAT for Acceptance for Auditable State Changes - 1

- **Objective:** Verify that: The system shall record state changes so that they are auditable.
- **Requirement Reference:** FR-020
- **Acceptance Criteria Reference:** AC-020.1
- **Preconditions:** A state change occurs in the system.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall record state changes so that they are auditable.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: A state change occurs in the system.
 - Step 2: Trigger the functional behavior: A state change is performed (for example, account activation, account freeze, or KYC status update).
 - Step 3: Observe system response: The system shall record state changes so that they are auditable.
 - Step 4: Verify the system behaves as expected.

UAT-035 - UAT for Acceptance for Synthetic Data Simulation - 1

- **Objective:** Verify that: The system shall use synthetic identities, accounts, balances, beneficiaries, and payments.
- **Requirement Reference:** FR-021
- **Acceptance Criteria Reference:** AC-021.1
- **Preconditions:** The simulation operates with synthetic data.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall use synthetic identities, accounts, balances, beneficiaries, and payments.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The simulation operates with synthetic data.
 - Step 2: Trigger the functional behavior: The simulation instantiates identities, accounts, balances, beneficiaries, or payments.
 - Step 3: Observe system response: The system shall use synthetic identities, accounts, balances, beneficiaries, and payments.
 - Step 4: Verify the system behaves as expected.

UAT-036 - UAT for Acceptance for Synthetic Data Simulation - 2

- **Objective:** Verify that: The system shall not use real money, real identity verification, or real banking integration.
- **Requirement Reference:** FR-021
- **Acceptance Criteria Reference:** AC-021.2
- **Preconditions:** The simulation operates with synthetic data.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** The system shall not use real money, real identity verification, or real banking integration.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: The simulation operates with synthetic data.
 - Step 2: Trigger the functional behavior: The simulation instantiates identities, accounts, balances, beneficiaries, or payments.
 - Step 3: Observe system response: The system shall not use real money, real identity verification, or real banking integration.
 - Step 4: Verify the system behaves as expected.

UAT-037 - UAT for Acceptance for Agent Artifact Quality - 1

- **Objective:** Verify that: Agent-produced artifacts shall be reviewable, reproducible, schema-valid, source-linked, and subject to human approval.
- **Requirement Reference:** FR-022
- **Acceptance Criteria Reference:** AC-022.1
- **Preconditions:** An agent produces an artifact.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Agent-produced artifacts shall be reviewable, reproducible, schema-valid, source-linked, and subject to human approval.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: An agent produces an artifact.
 - Step 2: Trigger the functional behavior: An agent produces or delivers an artifact.
 - Step 3: Observe system response: Agent-produced artifacts shall be reviewable, reproducible, schema-valid, source-linked, and subject to human approval.
 - Step 4: Verify the system behaves as expected.

UAT-038 - UAT for Acceptance for Requirements Traceability - 1

- **Objective:** Verify that: Approved business rules shall remain traceable through requirements, design, implementation, test, defect decision, and final evidence record.
- **Requirement Reference:** FR-023
- **Acceptance Criteria Reference:** AC-023.1
- **Preconditions:** BRD artifacts record source-to-requirement mappings.
- **Test Data:** Synthetic test data consistent with simulation constraints
- **Expected Business Outcome:** Approved business rules shall remain traceable through requirements, design, implementation, test, defect decision, and final evidence record.
- **Result:** PENDING
- **Actions:**
 - Step 1: Ensure preconditions are met: BRD artifacts record source-to-requirement mappings.
 - Step 2: Trigger the functional behavior: Downstream requirements or evidence are produced from business requirements.
 - Step 3: Observe system response: Approved business rules shall remain traceable through requirements, design, implementation, test, defect decision, and final evidence record.
 - Step 4: Verify the system behaves as expected.
